

## Java

```
class Solution {  
    public int maxFrequency(int[] nums, int k, int numOperations) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {number[]} nums  
 * @param {number} k  
 * @param {number} numOperations  
 * @return {number}  
 */  
var maxFrequency = function(nums, k, numOperations) {  
  
};
```

---

## TypeScript

```
function maxFrequency(nums: number[], k: number, numOperations: number): number {  
  
};
```

---

## C++

```
class Solution {
public:
    int maxFrequency(vector<int>& nums, int k, int numOperations) {

    }
};
```

---

## C#

```
public class Solution {
    public int MaxFrequency(int[] nums, int k, int numOperations) {

    }
}
```

---

## Kotlin

```
class Solution {
    fun maxFrequency(nums: IntArray, k: Int, numOperations: Int): Int {

    }
}
```

---

## Go

```
func maxFrequency(nums []int, k int, numOperations int) int {

}
```

---
